

7.2. Hiring of ICT technicians

The implementation of ICT projects requires a minimum staff at each university to complement and support additional actions aimed at the consolidation of the grouping and the internationalization of the five universities given that the greatest barrier to the implementation of these actions is not the medium itself but the lack of human resources to do so.

Each university will dispose of €35000 for hiring one or technicians, who should hold a university degree in communications or technology, possess technical knowledge of audiovisual methods, camcorders, video editing, and others as well as computer knowledge, especially editing (Photoshop, Premiere, etc.), sound file management and scripting. They will also be required to have an acceptable level of spoken and written English.
